

# Guide to MEASURING GATES

- Using our visual guide, aim to get as accurate measurements as possible of sections A, B & C below.
- Measure from underneath the cap to the ground on both sides - A & B.
- Measure both pillars – don't assume that they are both the same size!
- Get the distance between the inside of each pillar – point C.
- Should you proceed to order a gate, exact measurements will be taken by one of our team prior to fabrication in our workshop.
